

To Help Prevent Cavities, ACT[®] Your Age.

Using a fluoride mouthwash after brushing and flossing helps prevent cavities.

Here Are 4 Things That Can Impact Dental Health As You Age:

Dental Work¹

Bacteria can build up in weakened fillings. This can cause acid to build up and lead to cavities.

Eating Habits²

If you consume too many sugar-filled foods and drinks you could be at greater risk of developing cavities.

Heartburn³

Acids from heartburn can dissolve the enamel that protects your teeth from damage.

Prescription Medications

Over 500 medications list dry mouth as a side effect, which can increase the risk of tooth decay.

Use as directed.

Trust ACT[®], the #1 Dentist and Hygienist Recommended Fluoride Mouthwash Brand[†]
